

Complete audits and drive compliance to protect patient safety.

RLDatix Audits & Standards empowers your organization to enhance patient safety by ensuring compliance with regulatory standards that support high-quality care. Audits & Standards safeguards against fines and unnecessary costs by helping you prepare thoroughly for CQC inspections, using mock surveys aligned with the Single Assessment Framework. Our comprehensive auditing tool enables you to efficiently identify and close compliance gaps, driving continuous quality improvement.

A complete audit process

Create and schedule audits to help drive assurance and compliance from ward to board.

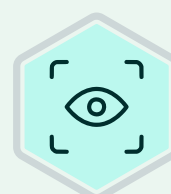

Supporting evidence

Our Inspections workflow helps you maintain inspection readiness by facilitating mock CQC inspections, conducting NICE baseline assessments, and measuring compliance with standards relevant to your organisation.

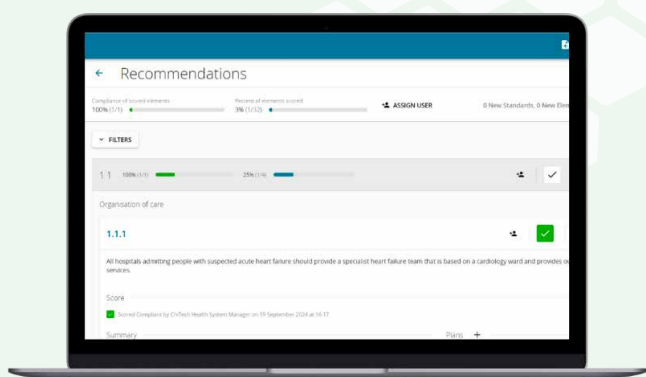

Drive a higher reporting culture

Comprehensive view of supporting documentation including mobile auditing, ability to link policies and internal files, and action plans to centralise work.

Ready your organisation for an inspection

Analyse compliance data reporting to pinpoint areas where additional training may enhance staff performance, identify updates to policies, and implement targeted improvements.

Streamline Your Audit Process with RLDatix Audits & Standards to Save Time and Enhance Efficiency

Seamlessly scalable, this solution enables trusts to standardise enterprise processes while accommodating facility-specific needs, driving rapid process improvement and time savings by eliminating redundant systems and manual workflows.

Features

- **Audit Tools** - Create and customize an unlimited number of audit templates and mock- inspections.
- **Standard linkages** - Standards are connected to audit templates and policies, providing assurance of compliance and policy adherence.
- **Audit Scheduling** - Schedule, track & manage all audits across different locations.
- **Inspection Readiness** - Maintain continual readiness for inspections by conducting mock surveys to track their compliance status, identify areas for improvement, and refine processes.
- **Action Plans** - Create structured action plans to efficiently resolve issues which can be tracked to completion to ensure ongoing, systemic improvements.
- **Efficient Management of Findings** - Create and close findings of non-compliance in a streamlined manner by assigning ownership and corrective actions to specific individuals or teams.
- **NICE Guidelines** - Guidelines are continuously updated and easily accessible to support the completion of NICE audits and baseline assessments.
- **CQC** - Monitor compliance with the new CQC Single Assessment framework and hold evidence for regulatory standards.
- **Reporting** - Identify and analyse trends for effective performance management.

Benefits

- **Enhanced clinical risk management** - Our system actively identifies and highlights areas of non-compliance, enabling organisations to promptly address potential risks and prevent incidents that may compromise patient safety.
- **Cultivating a culture of continuous improvement** - Compliance activities are integrated into daily organisational operations, empowering teams to proactively identify opportunities for enhancement.
- **Cost savings** - Reduce the preventable violations and CQC penalties through a referenceable and reportable audit program.
- **Streamlined audit process** - Automate data collection, analysis, and reporting, reducing manual effort and ensuring accuracy and consistency in audits.
- **Continual survey readiness** - Track compliance and action plans related to self-inspections, mock surveys, and official surveys to ensure you are inspection ready and have assured patient safety.
- **Access to resources** - Library of best practices, help resources and educational material empowering organisations to continuously improve their compliance process.

Audits & Standards creates a culture of compliance and continuous improvement so that you can elevate patient safety.
